

Take the Guesswork Out of Labor Management

Introducing
a revolutionary
labor management
system that
dramatically improves
customer service
and productivity.

Launched in November at FS/TEC, the Deterministics Labor System™ is the most precise labor management tool available to multi-unit restaurant operators.

- **DLS is based on Labor Recipes™** that precisely describe labor requirements across all aspects of your restaurants' operations.
- **DLS is the only labor management system** that accurately represents the impact of menu mix variations between restaurants and over time.
- **DLS enables managers to create schedules optimized to their unique business patterns** instead of relying on "one size fits all" chain-wide labor standards.
- **Deterministics develops and maintains your Labor Recipes™** to continually reflect your brand standards and best practices with no additional effort on your part.
- **DLS Web Based Implementation is Franchisee Friendly** — easy to implement with no up-front hardware or software investment required.

Deterministics

Kirkland, Washington • London, England

Experts in chain restaurant productivity.

Call Deterministics at **800.322.4146** or visit www.deterministics.com/labor today and find out how we can take the guesswork and legwork out of your labor management.
