Deterministics Completes Rollout of Deterministics Labor Intelligence System to Red Lobster Restaurants

May 1, 2017

Bellevue, Wash. - Deterministics announces the completion of the rollout of the Deterministics Labor Intelligence System (LIS) to Red Lobster's restaurants in the U.S. and Canada.

LIS uses time studied Labor Recipes™ that represent unambiguous measurements of labor requirements to assure high quality customer service and productivity. This system enables Red Lobster's managers to clearly see the labor performance of their restaurants, identifying areas of labor waste and short staffing. This increased visibility helps them improve staffing plans to utilize resources in the most effective and efficient way.

In addition, LIS provides Red Lobster's leadership team with high precision tools to evaluate the impact potential menu, recipe and workflow changes may have on labor requirements, which aids in overall performance projections.
